

Phase 7/8 Demo: Graphics, Tables, and Profiles

Tectonic LaTeXML IR Prototype

1 Overview

This document is a regular LaTeX file that should compile with the Tectonic CLI. It mirrors the accompanying `phase7_phase8_demo.tsem` event stream used by the prototype HTML pipeline. The example exercises graphics normalization, table normalization, references, and MathJax profile output.

2 Math and references

Equation 1 is rendered as display math in the prototype HTML profile.

$$x^2 + y^2 = z^2 \tag{1}$$

See Section 1 for the introduction.

3 Raster graphics

Figure 1 includes a raster image.

Figure 1: A small raster image used by the Phase 7 graphics normalization demo.

4 Tables

Table 1 demonstrates a simple table whose prototype IR normalizer wraps direct rows in `ltx:tbody` and preserves alignment/header metadata.

Quantity	Value
Events	42
Bins	7

Table 1: A small table for the Phase 7 table normalization demo.
